Project news!

**SiT
Sustainability in TCLF**

Welcome to the SiT newsletter!

We're so excited to share you that our SiT project is involved in ECOSYSTEEX.

ECOSYSTEEX is the European community of practice for a sustainable textile.

One key aim of ECOSYSTEEX is to support EU-level objectives (such as the Pact for Skills, the Union of Skills, and related policy goals) through joint activities, greater visibility, and stronger coordination.

For us this is an exceptional opportunity for international cooperation with a focus on long-term sustainable practices in TCLF – Textiles, clothing, leather and footwear industries.

More information for ECOSYSTEEX and their activities you can find on <https://www.ecosystemex.eu/>

Project news!

In recent years, it has become clear that the textile sector needs inevitable changes, which brings with many opportunities for development. The two emerging professions, BIO-Textile Technician and Recycling Manager, are an excellent opportunity for career development and a more sustainable and greener sector.

This is where our project comes in. As you may know we are in process of developing training materials, which will be available in the form of modules and uploaded to a MOOC platform. All materials will be available in the official languages of all project partners.

Making it simple, modern and innovative through this platform students, futures professionals and current workers will improve their knowledge and skills. Be informed and expand your knowledge and skills with us! Together we can achieve more!
